

# WE ARE WEAVERWORKS

## The GitOps Pioneers

---

### Our Company

Weaveworks is a global software and services company with offices in San Francisco, New York, London, and Berlin.

Founded in 2014, we set out to minimize complexities in operating workloads and provide a developer-centric model for cloud-native applications. We wanted to simplify and automate application delivery for developers without compromising security, stability, or availability. And GitOps - an operational framework for application deployment - was born.

As firm believers in the power of community, Weaveworks is a founding member of the Cloud Native Computing Foundation, creators and maintainers of successful OSS projects such as Flux and Flagger. Additionally, we are an AWS Strategic Partner, helping them accelerate EKS adoption. Weaveworks also created Ekctl, an indispensable CLI tool for providing managed Kubernetes services for EC2. Furthermore, Weaveworks is a key partner with Microsoft Azure, providing Flux support in Microsoft GitOps deployments.

### Our Products and Services

#### Weave GitOps Enterprise

A full-stack GitOps platform enabling continuous delivery, automation, and management of Kubernetes clusters at scale in any environment. Powered by Flux and Flagger, Weave GitOps simplifies the automation of CI/CD pipelines across multiple clusters.

- Tiered commercial support, customized for different team sizes.
- A single management console to operate hybrid and multi-cloud cluster fleets on-premise, in the cloud, or at the edge.
- Unified observability and management for instant full-stack understandings.
- Progressive Delivery to automate and monitor deployments.
- Component profiles enable teams to deploy standard services into any Kubernetes quickly, consistently, and reliably.
- Trusted application delivery adds policy as code for continuous security and compliance.

### Weave GitOps Assured

A solution that covers all aspects of continuous application delivery (CD) and cluster management for Kubernetes. Assured is a comprehensive subscription from the creators of FluxCD for open source GitOps and CD, featuring advanced policies, centralized governance and enterprise support. Start with well architected Kubernetes and start shipping more frequently, reliably and safely.

### Professional Services

For customers that want personalized care, advice and coaching, we can provide you with a named expert at your side to develop DevOps practices and handle support issues. Our SREs bring the latest DevOps skills, knowledge and experience to bear, working alongside your team and providing knowledge transfer. Included are recommendations on design, deployment and more general operations problems.
